

Lens Gaskets

Code: KXTRJL

Description

KXT Lens ring joint gasket manufactured in accordance with DIN 2696, provide the engineer with a high integrity, high pressure and temperature seal for special applications.

Lens rings have a spherical surface and are suitable for use with conical flange faces. So other styles are available on request.

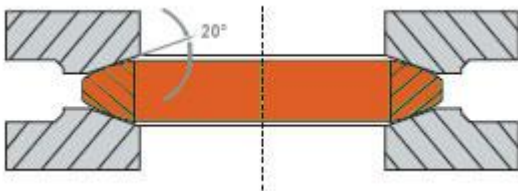

Lens Ring Joint Gasket

Item no.: KXTRJL

* Lens ring joint used in higher pressure then 3,000 lbs.

* These gaskets had been used on pipe flanges in synthesizing line.

Item no.: KXT610

Prime Features

As the standard, the gasket material should be softer than the flange material, thus ensuring that the applied compressive load leads to the elastic and plastic deformation of the lens ring and not the flange sealing face

As with all metallic joints, the re-use of lens rings is not recommended.
